### A Letter to my Future Self: STAY ON TRACK!

Hey, listen, it is you from the past. That is right, past you wrote this letter. It is a letter containing material of great importance. By the way, it is not like I am doing some type of cool time machine stuff, it is more like... a small information capsule to make sure you keep on the important stuff and get your stuff done on time. And by the way, you (future me) is a jerk for not having done your final on time. Gosh, don't let that happen again.

Anyway, with that exposition out of the way, I need to tell you something. Remember those study habits you learned? Well, they are absolutely paramount in staying on track in your college years. Remember to take a breather when stressed and play some games to relax after a long day. You should have everything you need for now, so don't spend money on games or electronics or any of that junk food for the rest of your time in college. An occasional snack while writing is okay, but do not overdo it. And finally, keep that goshdarned schedule throughout the rest of your college years!

Don't forget why you decided to come to UL, either. Keep that in your heart throughout your journey. If you forget that you came here to be a chemical engineer and play a key role in the industrial environment, your future will become hazy and uncertain. You have to cut through the fog of uncertainty and run through, preferably with a plan. When you get through with this, say hello to a big job with big money attached.

Oh yeah, one more thing about your career: remember to take on internships as you go through college! It may be a lot of work, but you can fill them out on your resume and make a portfolio for your future employers, so you are basically GUARANTEED to get that job you want at DuPont.

Don't forget that you can do this. Through all the troubles and hardships, remember that if you can make it through one semester, you can make it through seven more. Get that degree, boy!
